

# Compliance and Risk Services Overview

From the earliest planning stages for large power generation projects, compliance best practices are critical to prevent delays and lost revenue. No question: it's complicated. Radian Generation offers owners a range of proactive services to streamline the regulatory process and ensure the highest level of compliance on every site—allowing owners and investors to focus on the bigger picture.

## Issues Anticipated and Resolved. Deadlines Met.

Radian Generation believes in looking beyond what is required to what is best for a project. Proactively securing energy-generating assets in the current regulatory landscape is paramount to the success and performance of a project. A robust risk-management plan ensures that each client has a comprehensive view of all threats to people, assets and facilities.

Radian Generation's highly experienced compliance and risk team provides guidance and support every step of the way, from strategy and policy definition to project planning – all the way through implementation of new compliance programs and ongoing management. Radian Generation's regulatory experience, relationships and industry knowledge is continually leveraged to streamline assessment, develop requirements and implement processes. In-house expertise ranges from federal regulatory requirements (NERC and FERC) to state and regional offtakers (CAISO, ERCOT, PJM and others).

## Radian Generation's Compliance and Risk Services

### Cybersecurity Risk Discovery and Assessment

Collaborative review, development, and definition of policies and procedures to harden infrastructure and facilitate the recovery of key assets. Includes auditing and optimizing key IT/OT network hardware architectures and software systems, identifying responsibilities and stakeholder training.

### NERC Generator Owner (GO) Development and Managed Compliance Services (MCS)

Development and management of NERC GO compliance programs including corporate compliance, NERC GO compliance program development, MOD testing, CIP program development and ongoing compliance program management throughout the life of the asset.

### Managed Security Services (MSS)

Ongoing management of asset operational security services, including NERC CIP, cyber health and vulnerability assessments, inventory management, patch and change management and ongoing managed security services throughout the life of the asset.

### Network Design and Commissioning Review

Review and evaluate the network and OT infrastructure with a focus on continuity of operations, redundancy and long-term stability. Advocate for owner's interests throughout the design and implementation of the project.

### General Regulatory Compliance

Maintenance of clients' compliance with Federal Energy Regulatory Commission (FERC), Public Utility Commission of Texas (PUCT), CAISO and other ISOs, and general regulatory filing and compliance support. Radian also provides EQR reporting, MBR filings, NERC GOP consulting and CFIUS compliance for foreign owners.

## About Radian

Radian Generation was founded in 2013 on the core principle of driving sustainable growth by providing focused and professional asset management solutions for the renewable energy industry. During the formative years of the renewable market, Radian's founders fostered an acute awareness of the need for versatility, continuity and resiliency in a third-party business model for managing projects expected to last for decades. In 2022, Radian expanded to offer industry-leading services for asset management, compliance, cyber security, advisory and software services for solar, wind, and energy storage developers and owners.
