Technical and Operational Oversight

Radian Generation's Technical Asset Management (TAM) services provide a full array of management and performance monitoring for commercial and utility-scale renewable energy power plants. Utilizing an experienced team and leveraging Radian's proprietary LENS™ Asset Management platform as a historical database to track and display performance metrics and KPIs. Technical and compliance services include:

- » Outage and curtailment review
- » O&M contract review
- » Issue resolution and tracking
- » O&M invoice review
- » Equipment failure diagnosis
- » Secondary monitoring
- » Historical ticketing database
- » Monthly operations reports
- » Classification of alerts and alarms
- » Annual operations assessments

Performance Engineering

Well-positioned to offer a variety of performance engineering services, Radian Generation utilizes the knowledge obtained from its database of over 13 GW of operating assets to provide clients with unparalleled analysis of plant performance data. This enables Radian to assess equipment performance trends and monitor geographic anomalies while focusing on the following areas:

- » Identification of underperforming assets
- » Equipment benchmarking assessment
- » Equipment selection and optimization
- » O&M contractor management and assessment
- » Operating costs modeling
- » Forecast model review
- » Availability and resource validation
- » Monthly performance analysis
